heads

the libre privacy distro

born late 2016

inspired by Tails

focus on

privacy

anonimity

security

freedom

based on Devuan Ascii
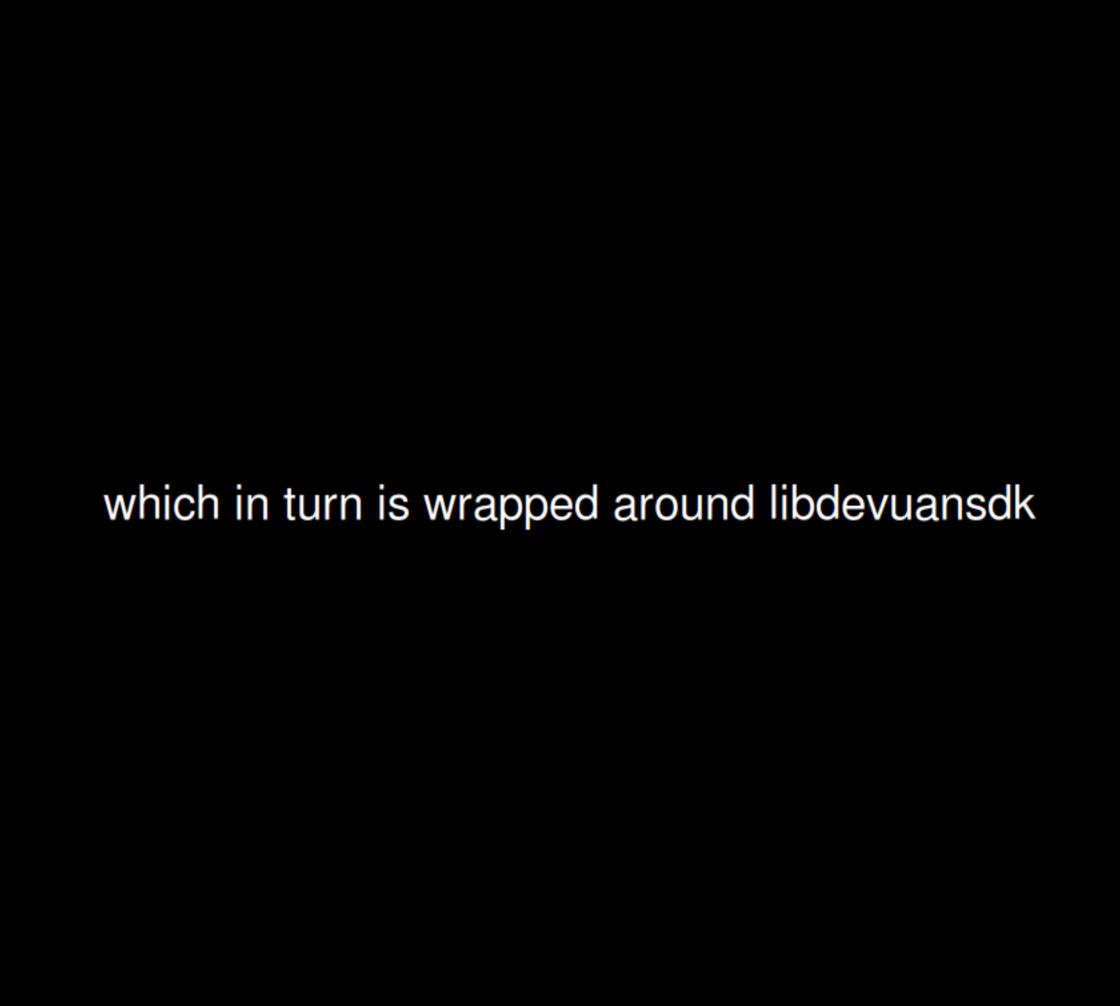

no systemd

patched with grsecurity
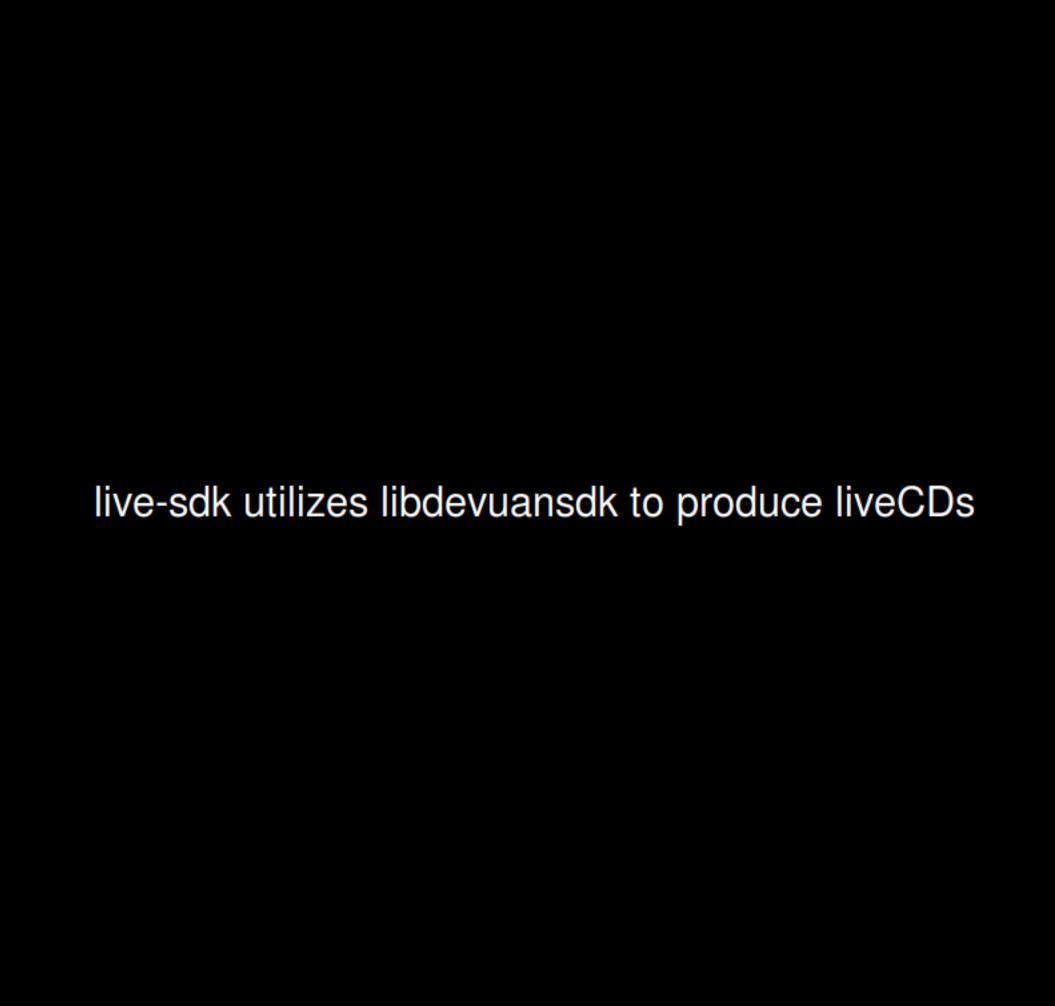

deblobbed with linux-libre

minimalist where allowed

heads' build system
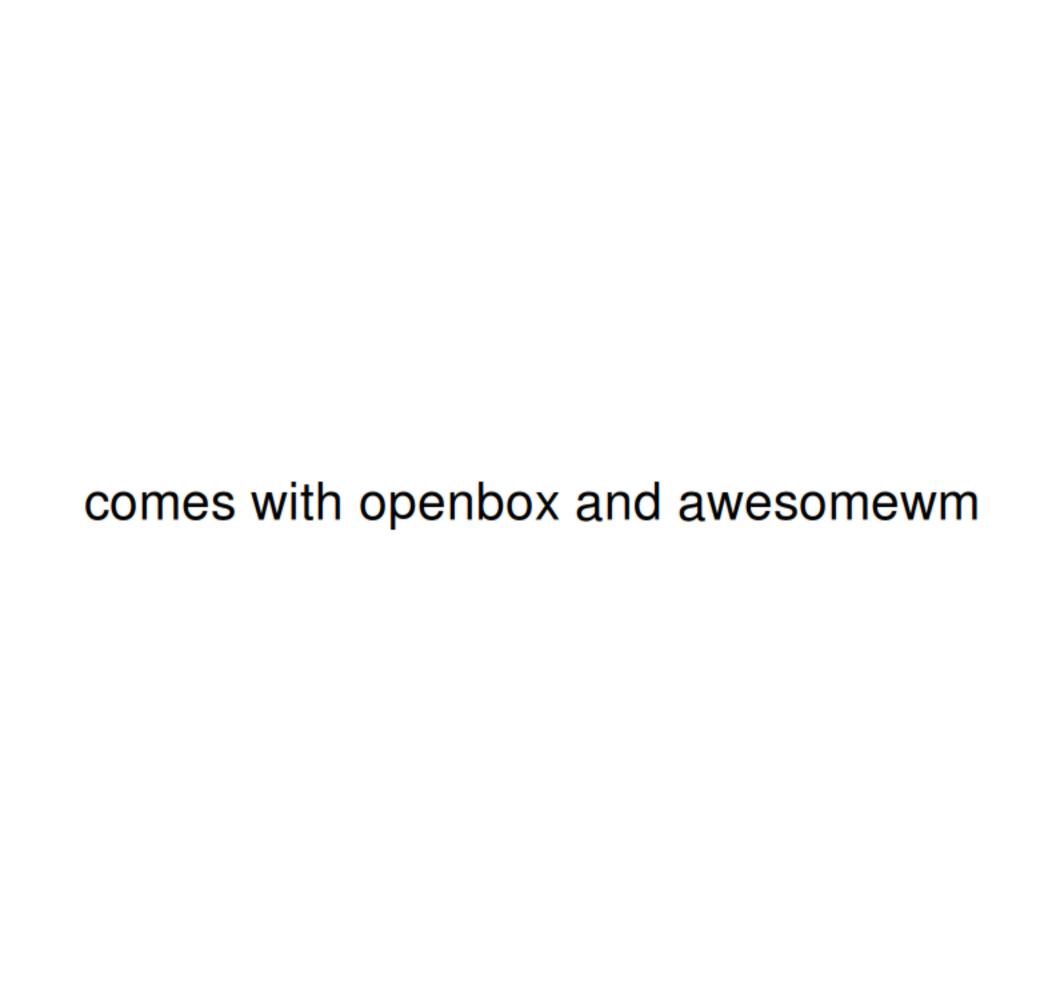

wrapped around live-sdk

which in turn is wrapped around libdevuansdk

sdk = simple distro kit

https://git.devuan.org/sdk

libdevuansdk is a common library for bootstraping Devuan written in zsh
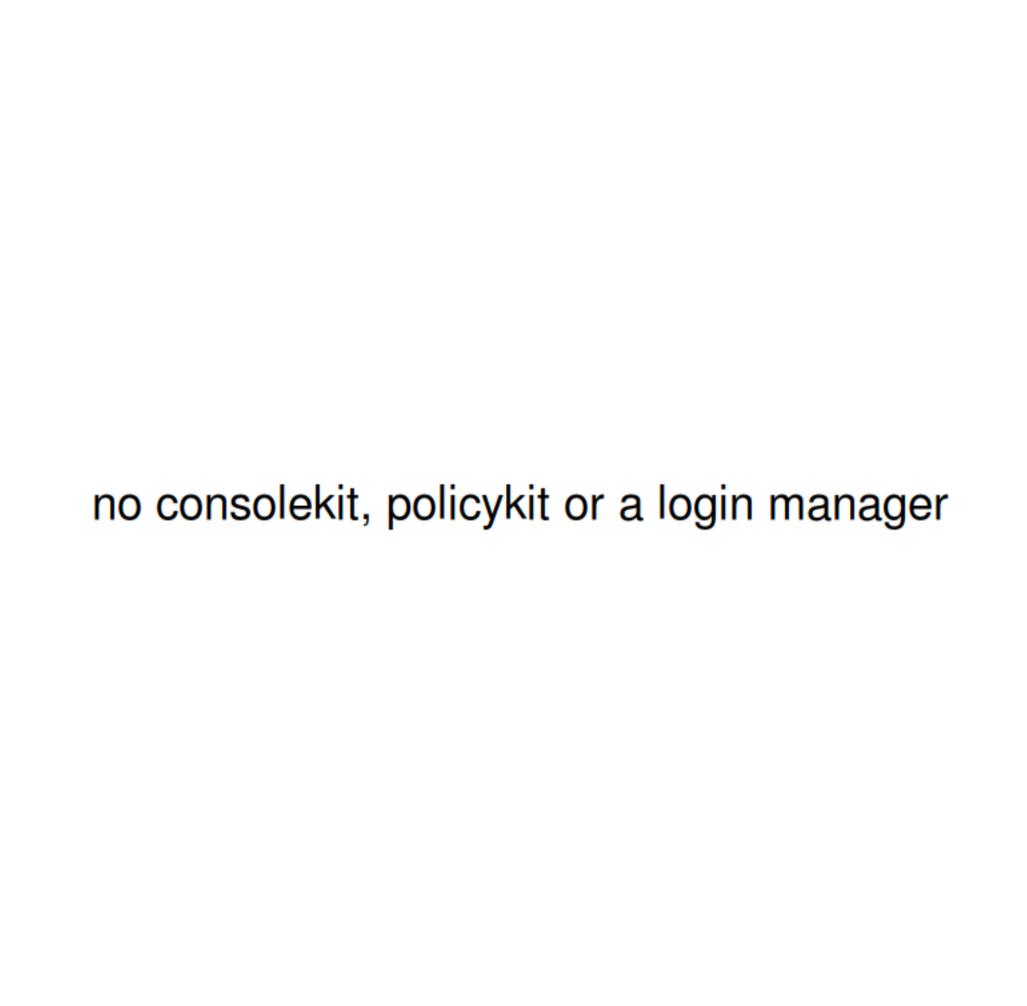

live-sdk utilizes libdevuansdk to produce liveCDs

supports a system called 'blends', which allows for easy creation
of derivatives and customized distribuitions

heads' interface

comes with openbox and awesomewm

as little bloat as possible

no consolekit, policykit or a login manager

less code == less obsolete code == smaller attack surface

utilities, editors, and a web browser, along with CLI software as well

questions

- what is missing?

- what is extra?

- general thoughts?
